Formula to Calculate Additional Tax Levy for Tax Purposes

Take the assessed value of your property, divide by $100, and then multiply the result by the 50-cent additional tax levy. This amount would be the property tax increase yearly for the four-year period.

Example:

If the assessed value of your property is $9,000 divided by $100 equals $90.

$90 times the .50 additional tax levy equals an additional $45 property tax increase yearly for four years.
